Roku premiere remote app

Roku's streaming box line is still the most popular, beating Google's Chromecast and Apple TV. Roku recently updated its hardware, but there are still four different options to choose from, not the single option you get with competing devices. RELATED: Which Roku should I buy? Express vs Stick vs. Stick Stick+ vs Ultra Update: Roku's scene has changed slightly, so check out our latest Roku buying guide here for the latest information. The choice here is not as simple as it sounds. Roku 2 and Roku 3 boxes now have identical interiors - the only difference is the type of remote control with which these Roku are available. And now the Roku 4 is on the scene with 4K Ultra HD support. Roku Streaming Stick - \$40 Other Roku devices are small boxes, but the Roku Streaming Stick is a small stick that connects to your HDMI port, a bit like a Chromecast. Unlike a Chromecast, the Roku Streaming Stick comes with a remote control. This is a point anywhere remote control that connects to the Roku via Wi-Fi Direct. Roku touts this device as perfect for wall-mounted TVs. It is definitely the ideal device if you want a Roku as small as possible: just plug it in, no additional box is needed. Roku devices are already small, so this is really only important if you're mounting your TV on a wall and don't want additional cables and boxes. RELATED: How to use your Roku as a Chromecast It's also the cheapest Roku, and that's useful. Since a Chromecast costs \$30, you're paying another \$10 here for the convenience of having a remote control. This device also offers support for Miracast screen mirroring and DIAL send-to-TV functionality. The main drawback of the Roku Streaming Stick is that it is slower than Roku 2 and 3. Due to its small size, it also lacks an Ethernet port (so no wired network - Wi-Fi only) and usb and microSD card slots for viewing local video files. Who should buy this: people who need a Roku for a wall-mounted TV or bargain hunters who want a Roku experience at the lowest possible price. Roku 1 - \$50 Roku 1 has the oldest interior. It lacks modern features such as Miracast screen mirroring and DIAL send-to-TV functionality. It also has an old Netflix app with no user profiles. Its processor is slower and contains older Wi-Fi hardware. Despite being a greater form factor than the streaming stick, it also lacks Ethernet, USB and microSD hardware. Unlike the streaming key, the Roku 1 has a remote control with an IR blaster - rather than pointing it anywhere, you have to point it directly at the Roku box, as if you'd point a TV remote control at the TV. The single advantage of the Roku 1 is that it comes with the ability to emit via composite cables (those red, white and yellow cables) and HDMI. If you want to connect a Roku to an older TV that doesn't have HDMI ports, this is the only Roku you get. (You could potentially buy an hdmi-composite converter, but most people won't) If tv TV have HDMI ports, you shouldn't get it: the Roku Streaming Stick is cheaper and better, offering more modern conveniences. Who should buy this: people who want to connect a Roku to an old TV without HDMI ports. Roku 2 - \$70 RELATED: How to watch downloaded or torn video files on your Roku Roku 2 and 3 are the most similar and you'll probably have the hardest time choosing between these two. The updated Roku 2 is actually as fast as the Roku 3 - the box itself has the same interior. Get all the features from the Roku Streaming Stick (screen sharing, DIAL TV submission features, and a modern Netflix app). You also get a Roku box with Ethernet functionality for wired network and USB and microSD hardware for viewing your media files. The Roku 2 has a faster processor than the streaming stick - the same found in roku 3, which is the fastest processor you can get in a Roku. Like the Streaming Stick, the Roku 2 and 3 only support HDMI output. The Roku 2 remote control uses an IR blaster, which means it needs to be pointed directly at the Roku 2 box to work. The Roku 3 stands out from the Roku 2 by offering a more imaginative remote control with more powerful features. But, if you are not interested in the updated remote control, this Roku otherwise has the same hardware and is the best value for money. Who should buy this: Most people, unless they want to pay another \$30 for the remote features found below. Roku 3 - \$100 The Roku 3 previously had faster hardware inside than the Roku 2, but no longer does. Now, the only difference is the remote control provided by Roku 3. Everything else is the same as Roku 2. Where the Roku 2 has a remote control that depends on an IR blaster, the Roku 3 has a remote control that can be pointed anywhere - like the Roku Streaming Stick remote control, it uses Wi-Fi Direct. Unlike the Roku Streaming Stick remote control, the Roku 3 remote control has other features. It has a built-in headphone jack, which allows you to easily connect headphones to it and watch TV without disturbing other people. It offers voice search, so you can press a button and talk to the remote control to look for something to watch. It also offers motion control features that games can use. Roku games haven't really taken off, so these motion control features feel like a gimmick. RELATED: How to use headphones with your TV The headphone jack and voice search are useful, but keep in mind that you can plug your headphones into your TV in other ways and use Roku's official smartphone app to perform voice searches on your TV. The point-anywhere nature of the remote control is nice, but pointing the remote control at the Roku may not be a big deal. It is up to you if these features are worth the for an extra \$30. Who should buy this: people who want a remote control with a built-in headphone jack and voice search. Roku 4 - \$129 New for roku line is the Roku 4, which is specifically made to support 4K Ultra HD content and has a faster processor than the other Roku Roku As for the features, everything else is roughly the same as the Roku 3, so if you don't have a 4K TV there's no reason to pay the extra money right now. If you have a 4K TV, however, you might want to pay the extra \$30 just future-proof, but note that there isn't a lot of 4K content right now, so don't expect to have a lot of media to watch. Who should buy this: people who have a 4K TV, want a remote control and the latest and largest Roku. Most Roku buyers should buy Roku 2 or Roku 3. These are basically the same hardware components and differ only in the remote controls they come with. The real question here is Do you want to pay an extra \$30 for some fancy remote control features? It's up to you. People who have old TVs should buy the Roku 1, and people with wall-mounted TVs should get a Roku streaming stick. This assumes that you want to buy a Roku in the first place, of course. You have many other options these days, from Chromecast to Apple TV to Amazon Fire TV.
